

Letters Island is one of three applications that comes with eNipuna software Kit. It is a 3D computer game. Although, there are numerous computer games available in various languages, it's very rare to find a one in Sinhala language. Letters Island has been created to help the child understand the characters of English and Sinhala alphabet and the words created using those characters

It is with great humility that we introduce the Letters Island, which contains scenic backgrounds that attract children's minds, as the **1<sup>st</sup> 3D computer game in Sinhala** language. Moreover, it has won the award for the

**Best Educational Software 2010**

in eSwabhimani award ceremony organized by the

[Presidential Secretariat of Sri Lanka](#)

and the

[Information and Communication Technology Agency of Sri Lanka](#)

(ICTA).

The game does not contain any images or activities that are inappropriate to the child's mind and the challenge for your child is to seek and find the correct character among many other letters scattered throughout an island. Once the child locates the correct character, he/she is awarded with a video containing words constructed with that character. The game is created in a challenging manner, so that if the child selects a wrong character, his/her chance to play the game is reduced. Once the child has located all alphabetic characters, child is promoted to the next level where he/she can fill in the blanks to create words.

{module [52]}

- Your child can self-learn all 36 Sinhala letters and words created using the letters which are taught at primary level.
- Child has to walk all over the island and seek the targeted character and once the correct letter is found, the child is awarded with a video of a word that begins with the given character.
- The player will get better at recognising letters as he/she has to find the correct letter among many incorrect ones.
- If the child selects an incorrect letter, he/she is unrewarded by reducing the play time, thus challenging the child.
- By letting your child to play a computer game, you are helping him to effortlessly learn

how to use the computer as well.

- It is a 3-D Computer game. It is created so that your child can learn the letters of the Sinhala alphabet & the simple words by him self. He is learning them in a more attractive computer based study environment.
- This game is comprised of seven (7) levels, which are created as different attractive islands.
- Once he completes that challenge, he can listen the correct pronunciation of that word.

### Minimum System Requirements

- Microsoft Windows XP or Vista , windows 7
- Intel Pentium 4 1.8GHz / AMD Athlon/ Sempron 1800+ or greater
- 200 MB disk space
- Microsoft DirectX 9.0c

DirectX 9.0C or greater must be installed on your system to run the Akuru Dupatha / Letters Kingdom properly. Download the DirectX 9.0C Web Installer from the link below and run it. Please note that the installer requires a connection to internet to complete the installation.
